Experience

Ford Motor Company | Dearborn, MI

Associate Product Manager

Jun. 2026 – Present

- Driving the launch of a new scheduling feature with mobile engineering and design to surface the next 24 hours of departures, software updates, and charging; targeting monthly active usage of **30%** on the home screen and **10%** on the full schedule page.
- Cut intake and planning time by **50%** by centralizing platform requests in **Jira**, replacing messages, emails, and Confluence tracking while enabling leadership to stack-rank work.
- Used customer interviews to shape a **Lincoln Navigator health widget prototype**, retaining essential metrics and removing those customers found unnecessary or stressful; built integrations with Apple Watch, supported Android watches, and Oura Ring.
- Defined **product requirements (PRD)** for an ongoing mobile architecture redesign focused on reusable capabilities, targeting **30% shorter feature delivery cycles** and a **50% reduction in screen load time**.

Software Engineer, Digital Product Lab

Jan. 2026 – Jun. 2026

- Enabled a product manager and development team to evaluate in-vehicle gaming under poor connectivity by building an internal network test device with bandwidth controls and packet-loss simulation.
- Built a **C++ steering-wheel prototype** for the design team to simulate steering-wheel interactions through Bluetooth keyboard inputs.

Software Validation Test Engineer

Sep. 2025 – Jan. 2026

- Reduced test time for **30 Battery Energy Control Module requirements from 90 minutes to 5 minutes** through Python automation; developed **2 scripts** from concept through production integration.

Ford Motor Company | Dearborn, MI

Software Engineer Intern

Jun. 2024 – Aug. 2024

- Reduced total electronic control unit (ECU) runtime environment generation time by **over 70%** by building an internal automation tool.
- Delivered **2 production-ready** battery control features in C/AUTOSAR and implemented **100+ end-to-end tests** during migration to Simulink Test.

Acsia | Bangalore, India

Software Engineering / Product Management Intern

May 2023 – Aug. 2023

- Developed **400+ system, software, and electrical requirements** for an automotive project following ASPICE and ISO 26262 processes.

Skills

Product: Product requirements, feature launches, prioritization, customer interviews, rapid prototyping, Agile, software development lifecycle (SDLC)

Technical: Python, Kotlin, C++, C, Java, SQL, JavaScript/TypeScript, APIs, React, React Native

Tools: Jira, Confluence, Git, Android Studio, Firebase, Simulink Test

AI-native development: Codex, Claude Code, OpenCode; custom agents and skills, Model Context Protocol (MCP) integrations, workflow automation

Education

Michigan State University

Bachelor of Science in Computer Science | **GPA: 3.85/4.0**

May 2025

- **Rush Chair, Kappa Sigma:** Led recruitment for **30+ prospective members** and managed a **\$5,000 budget** to plan recruitment events.
